DETAILED ACTION

Response to Arguments

Applicant's arguments see "Remarks" pages 5-6, filed February 04, 2008, with respect to Claims 15, 18-20 and 22 have been fully considered and are persuasive. The "Final Rejection" of November 02, 2007 has been withdrawn.

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Response to Amendment

An "Amendment" was received on February 04, 2008, in response to Office Action of November 02, 2007. Claims 16, 18, 20 and 22 have been amended and claims 17 and 21 have been cancelled.

Allowable Subject Matter

Claims 16, 18-20 and 22 are allowed.

The sample processing apparatus configuration was not found in a prior art search. The search failed to show or suggest the prior use of: temperature controlling means for controlling temperatures of the probe and the sample individually to prevent a temperature change of the part of the sample when the probe is brought into contact with the part of the sample and when the sample is irradiated with an ion beam by the ion beam generation means, wherein the emitted signal is secondary electrons or secondary ions, and the detection means includes a first detector for detecting the

secondary electrons and a second detector for detecting the secondary ions in configuration with the limitations of independent claims 16 and 22.

The following is an examiner's statement of reasons for allowance:

In regards to claim 16, prior art fails to disclose a sample processing apparatus comprising: a probe; probe moving means for moving the probe such that the probe is brought into contact with a part of a sample; adhering means for adhering the probe to the part of the sample; ion beam generation means for irradiating the sample with an ion beam to separate the part of the sample from a remaining body of the sample; and detection means for detecting a signal emitted from the sample in response to irradiation with an ion beam generated by the ion beam generation means; and temperature controlling means for controlling temperatures of the probe and the sample individually to prevent a temperature change of the part of the sample when the probe is brought into contact with the part of the sample and when the sample is irradiated with an ion beam by the ion beam generation means, wherein the emitted signal is secondary electrons or secondary ions, and the detection means includes a first detector for detecting the secondary electrons and a second detector for detecting the secondary ions.

Claims 18-20 are allowed by virtue of their dependencies on the independent claim 16.

In regards to claim 22, prior art fails to disclose A sample processing apparatus comprising: a probe; probe moving means for moving the probe such that the probe is brought into contact with a part of a sample; adhering means for adhering the probe to

the part of the sample; ion beam generation means for irradiating the sample with an ion beam to separate the part of the sample from a remaining body of the sample; detection means for detecting a signal emitted from the sample in response to irradiation with an ion beam generated by the ion beam generation means; temperature controlling means for controlling temperatures of the probe and the sample individually to prevent a temperature change of the part of the sample when the probe is brought into contact with the part of the sample and when the sample is irradiated with an ion beam by the ion beam generation means; and detection means for detecting a signal emitted from the sample in response to irradiation with an ion beam generated by the ion beam generation means, wherein the detection means includes a first detector for detecting secondary electrons and a second detector for detecting secondary ions.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pertinent prior art is closely related art that individually or in combination could be considered grounds for rejection. See references cited for a listing of the pertinent prior art found and the prior art found.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
